

Analysis Methods and Assumptions

Synchro/ SimTraffic software was used in the analysis.

- Synchro provides detailed output for intersections in isolation.
- SimTraffic provides output for a wider road network that accounts for the impact of nearby intersections.

HCM Unsignalized Intersection Capacity Analysis
5: Six Mile Rd & Atkins Rd
Existing PM

Approach LOS	C	D										
Intersection Summary												
Average Delay			5.4									
Intersection Capacity Utilization			68.9%			ICU Level of Service						C
Analysis Period (min)			15									

Assumptions

- To calculate future vehicle volumes a 1.5% yearly growth rate was applied to Atkins Road and Trans Canada off-ramp. A 2% rate was applied to Island Highway through volumes.
